

MID TERM EXAMINATION

Paper: Mid Term Examination - Set A | Duration: 3 Hours | Max Marks: 20 | Date: 13-03-2026

Total Questions: 10 | Answer all questions.

Name: _____

Roll No: _____

Student Sign: _____

Teacher Sign: _____

SECTION A: MCQS

1. What are the four main characteristics of a well-designed screen, according to the provided text? **[2 Marks]**
 - a) Reflects programmer's preferences, ignores hardware limitations, uses outdated software, focuses on cost-cutting.
 - b) Reflects the capabilities, needs, and tasks of its users; is developed within physical hardware constraints; effectively utilizes
 - c) Prioritizes complex animations, requires extensive user training, is platform-independent, and is always full-screen.
 - d) Avoids user input, updates frequently, disregards system objectives, and is designed without any visual elements.
2. Which of the following is explicitly listed as a method to distract the screen user? **[2 Marks]**
 - a) Providing clear captions and well-worded questions.
 - b) Using proper type and graphic emphasis to highlight important elements.
 - c) Presenting misleading headings.
 - d) Displaying information requests perceived to be highly relevant.
3. As defined in the source text, what is the primary concern of Information Retrieval (IR)? **[2 Marks]**
 - a) The physical characteristics of display devices.
 - b) The study of finding required data.
 - c) The development of sketch tools for designers.
 - d) The organization of screen elements for visual clarity.
4. According to the text, what is the "simple test for good screen design" that helps a screen surmount the first obstacle to effectiveness? **[2 Marks]**
 - a) Can the screen load within a fraction of a second, regardless of network speed?
 - b) Is the screen aesthetically pleasing and consistent with modern design trends?
 - c) Can all screen elements be identified by cues other than by reading the words that identify or comprise them?
 - d) Does the screen effectively use all available display colors and animation features?
5. What is the stated main benefit of consistency in interface design? **[2 Marks]**
 - a) It ensures that all interface elements are visually unique across different applications.
 - b) It significantly aids learning and establishes an expectation for users.
 - c) It allows for rapid iteration of design elements without impacting user experience.
 - d) It primarily reduces the memory requirements for the underlying software.
6. Which of the following accurately lists the five primary Interface Design Goals outlined in the provided text? **[2 Marks]**
 - a) Maximize visual, intellectual, memory, and motor work, while increasing technological burdens.
 - b) Minimize visual, intellectual, memory, and motor work, and reduce screen elements.
 - c) Reduce visual, intellectual, memory, and motor work, and minimize or eliminate any burdens or instructions imposed by tech

d) Increase system complexity, expand functionality, enhance graphics, improve processing speed, and optimize network usage.

7. What is a specific feature of the HCI Browser (HCIB) developed by the research team of North Carolina University? [2 Marks]

- a) It is a proprietary software designed exclusively for commercial use.
- b) It can only evaluate desktop applications, not web presenting tasks.
- c) It is available as an add-on for the Firefox browser.
- d) It stores only user login times, without any other event data.

8. In menu design, what are the listed advantages of a menu system characterized by "greater breadth and less depth"? [2 Marks]

- a) It results in less crowding on the menu and fewer choices to be scanned.
- b) It leads to more steps and longer time to reach an objective, with higher error rates.
- c) It offers fewer opportunities to wander down wrong paths and easier learning by allowing users to see relationships of menu items.
- d) It makes hiding inappropriate choices easier and reduces the likelihood of confusing similar choices.

9. How does "Local structure" in navigation design primarily provide context to the user about their current location and possible actions within a single screen or page? [2 Marks]

- a) By displaying a comprehensive network diagram of all application screens.
- b) By offering a general or main menu that encompasses all system alternatives.
- c) By indicating where they are, what they can do, what will happen upon action, and where they have been (e.g., via breadcrumb).
- d) By consistently presenting critical options permanently, without obscuring other data.

10. According to the text, for what specific situations should a "Modal" window be used? [2 Marks]

- a) When interaction with other windows must be permitted and frequently repeated.
- b) For presenting information, receiving user input, or asking questions, specifically when interaction with any other window must be suspended.
- c) As a primary window that represents an independent function or application, providing a persistent workspace.
- d) To provide advanced options at the same level in a complex dialog, expanding downward or to the right.
