

MID TERM EXAMINATION

Course: Data Structures (CS101)

Set: B | Time: 3 Hours | Max Marks: 128 | Date: 14-03-2026

Total Questions: 17 | Answer all questions.

Name: _____

Roll No: _____

Student Sign: _____

Teacher Sign: _____

SECTION A: MCQs

1. Which of the following is listed as a type of scenario used in architectural evaluation? [3 Marks]
- a) Budget scenario
 - b) Compliance scenario
 - c) Growth scenario
 - d) Performance scenario
2. According to the text, which of these is a formal and structured evaluation approach? [3 Marks]
- a) SWOT Analysis Method
 - b) ATAM (Architecture Trade-off Analysis Method)
 - c) Agile Evaluation Method
 - d) Waterfall Evaluation Protocol
3. When using an off-the-shelf component like PayPal for online payments, what is a direct consequence for the system's architecture? [3 Marks]
- a) Faster development of the PayPal component.
 - b) The system design must fit PayPal's API flow.
 - c) Unlimited customization of PayPal's internal behaviour.
 - d) Reduced need for architectural documentation.

SECTION A: SHORT ANSWERS

4. Differentiate between "Risks" and "Sensitivity points" as identified during a successful architectural evaluation [6 Marks]
5. List any four key stakeholders whose involvement is crucial for successful architectural evaluation, as specified in the text. [6 Marks]
6. Explain "Faster development" as an impact of using off-the-shelf components, providing the example given in the source text. [6 Marks]
7. Name any four factors that architects consider when making design decisions for a software system. [6 Marks]
8. How do "Budget and Schedule" influence design decisions in software architecture? Provide an example from the text. [6 Marks]

9. Describe the impact of "Limited customization" when incorporating an off-the-shelf component, including the example provided in the text. [6 Marks]
10. Name the two specific formal and structured evaluation approaches mentioned in the text that improve evaluation success. [6 Marks]

SECTION A: LONG ANSWERS

11. Discuss how the expertise of an "Experienced Evaluation Team" contributes to a successful architectural evaluation. What specific understandings should such professionals possess according to the text? [11 Marks]
12. Explain the significance of "Alignment with Business Goals" in the successful evaluation of architecture. What three specific aspects must the architecture support to achieve this alignment? [11 Marks]
13. Detail the three different types of scenarios that are essential for good architectural evaluation. Briefly explain what each type describes. [11 Marks]
14. Describe the importance of "Non-Functional Requirements (Quality Attributes)" in design decision-making for software architecture, providing the specific example mentioned in the text. [11 Marks]
15. Discuss "Vendor dependency" and "Hard to replace later" as two significant impacts of using off-the-shelf components. Provide the examples given in the text for each impact. [11 Marks]
16. Enumerate and briefly explain any five factors that contribute to the successful evaluation of a software architecture. [11 Marks]
17. Explain the "Architecture must adjust to the component" and "Extra integration work" impacts when incorporating off-the-shelf components into a system. Include the examples provided for each impact. [11 Marks]

--- End of Question Paper ---
